

Porphyry Copper-Gold Mineralization Extended at Cowtrail Project, British Columbia

Lea Lake Zone Drilling Confirms Continuity of Southwest-Trending Corridor

Vancouver, BC – November 27, 2025 – BRS Resources Ltd. (TSX-V: BRS) and Cariboo Rose Resources Ltd. (TSX-V: CRB) announce results from a four-hole, **1,138-metre diamond drill program** completed in August 2025 at the Cowtrail Project, south-central British Columbia.

Cowtrail is a **100% Cariboo Rose-owned, 4,717-hectare porphyry copper-gold project** contiguous with the Woodjam copper-gold porphyry project owned by Vizsla Copper Corp. (TSX-V: VCU). The 2025 program targeted the Lea Lake Zone, a **southwest-trending mineralized corridor** associated with historic induced polarization anomalies and coincident magnetic features extending beyond the original 2007 discovery intercept.

Results confirm the continuation of porphyry-style copper-gold mineralization, which remains open along strike and at depth.

2025 Drill Results

Hole id	From	To	Interval	Copper	Gold	Copper %
	(m)	(m)	(m)	(%)	(g/t)	Equivalent
CT25-23	86.0	156.0	70.0	0.20	0.100	0.31 (*1)
incl	86.0	106.0	20.0	0.26	0.140	0.41 (*1)
CT25-24	29.0	137.0	108.0	0.11	0.080	0.20 (*1)
and	170.0	269.0	99.0	-	0.134	-
incl	170.0	218.0	48.0	-	0.184	-

Copper Equivalent (CuEq) values represent the combined value of recoverable copper and recoverable gold in one tonne of rock divided by the value of copper in one tonne grading 1.0% copper at the same recovery rate for copper, using metal prices of US\$4.50/lb copper and US\$3,500/oz gold at an assumed recover rate of 80% for copper and 75% for gold. No specific metallurgical work has yet been completed. True widths are unknown.

Plan and cross-section diagrams accompanying this release illustrate all drill holes completed in the 2025 program. Drill traces and mineralized intervals are shown in full on both views.

Historic drilling and geophysics define a coherent southwest-trending mineralized vector extending beyond the 2007 discovery hole. **Previous significant intercepts include 0.15% Cu and 0.12 g/t Au over 105.0 m, 0.17% Cu and 0.11 g/t Au over 40.0 m, and 1.16 g/t Au over 18.3 m.**

An unpublished 1991 Cogema Canada Ltd. report documented mineralized biotite diorite and monzodiorite float associated with a strong circular Total Magnetic Intensity (TMI) anomaly several hundred metres further along this same trend, indicating additional untested potential within the corridor.

Cowtrail has been under option to BRS Resources Ltd. since 2022. BRS may earn a **60% interest** by completing **\$2,000,000 in exploration expenditures**, making **\$200,000 in cash payments**, and issuing shares equivalent to **\$200,000** by **December 19, 2027**.

Analyses were performed by MSALABS of Langley, BC using ICP multi-element analysis and 30-gram fire assay. Standards and blanks were inserted by the company and additional samples by the laboratory and sampling was conducted at approximately 3-metre intervals.

A qualified person has verified the data disclosed, including sampling, analytical, and test data.

J.W. (Bill) Morton, P.Geo., a Director of Cariboo Rose Resources Ltd. and a Qualified Person under National Instrument 43-101, has reviewed and approved the technical content of this release.
