Diamond Drilling and Airborne Geophysical Surveys Begin at Cowtrail

Vancouver, BC – May 13, 2026 – BRS Resources Ltd. (TSX-V: BRS) and Cariboo Rose Resources Ltd. (TSX-V: CRB) announce the initiation of the 2026 field program at the Cowtrail Copper-Gold Porphyry Project in south-central British Columbia.

Cowtrail is a 4,717-hectare copper-gold project contiguous with the Woodjam and Redgold copper-gold porphyry projects owned by Vizsla Copper Corp. (TSX-V: VCU). It is located 20 kilometers southeast of the operating Mount Polley Mine (copper-gold) owned by Imperial Metals Corporation and shares many geological attributes with this deposit.

Precision GeoSurveys has been engaged to complete a helicopter-borne high-resolution aeromagnetic, radiometric, and VLF survey over a core area encompassing 27 square kilometers at a nominal line spacing of 100 meters, with flying expected to commence within approximately one week.

Paradigm Diamond Drilling has been retained to complete 1,500 meters of drilling on targets identified in 2023 and 2025, highlights of which include CT23-16 with 108 meters grading 0.15% copper and 0.009 g/t gold starting at 60 meters, and CT25-23 with 70 meters grading 0.20% copper and 0.102 g/t gold starting at 86 meters. Drilling is expected to start in about two weeks.

Since 2022, Cowtrail has been under option to BRS Resources Ltd., which may earn a 60% interest by completing \$2,000,000 in exploration expenditures, making \$200,000 in cash payments, and issuing shares equivalent to \$200,000 by December 19, 2028.

J.W. (Bill) Morton, P.Geo., a Director of Cariboo Rose Resources Ltd. and a Qualified Person under National Instrument 43-101, has reviewed and approved the technical content of this release.
