AIRBORNE GEOPHYSICAL SURVEY COMPLETED AT COWTRAIL

Vancouver, BC – May 27, 2026 – BRS Resources Ltd. (TSX-V: BRS) and Cariboo Rose Resources Ltd. (TSX-V: CRB) are pleased to announce the completion of a helicopter-assisted airborne geophysical survey at the Cowtrail Copper-Gold Porphyry Project in south-central British Columbia.

Precision GeoSurveys of Langley, BC was engaged to complete a helicopter-borne high-resolution aeromagnetic, radiometric, and VLF survey over a core area encompassing 27 square kilometers at a nominal line spacing of 100 meters.

Processing and interpretation of the survey data will commence immediately. Potential targets generated from this work may include magnetic highs associated with new (previously unknown) porphyry centres, as well as areas of pervasive magnetic lows that may reflect pyrite destruction caused by circulating hydrothermal fluids capable of precipitating copper and gold mineralization.

Paradigm Diamond Drilling of Kamloops, BC has been retained to complete a 1,500-meter drill program, which is expected to commence imminently.

Cowtrail is a **4,717-hectare** (47 square kilometer) **copper-gold project** contiguous with the Woodjam and Redgold copper-gold porphyry projects owned by Vizsla Copper Corp. (TSX-V: VCU). The project is located approximately 20 kilometers southeast of the operating Mount Polley Mine (copper-gold), owned by Imperial Metals Corporation, and shares many geological characteristics with that deposit.

Since 2022, Cowtrail has been under option to BRS Resources Ltd., which may earn a **60% interest** in the project by completing **\$2,000,000 in exploration expenditures**, making **\$200,000 in cash payments**, and issuing shares equivalent to **\$200,000** by **December 19, 2028**.

J.W. (Bill) Morton, P.Geo., a Director of Cariboo Rose Resources Ltd. and a Qualified Person as defined under National Instrument 43-101, has reviewed and approved the technical content of this news release.
